Summary

I'm a self-taught software engineer with almost 20 years of hands-on programming experience, including nearly a decade of professional experience specializing in iOS development, with growing expertise across backend systems, web technologies, CI/CD pipelines, analytics, and cross-platform development. While my foundation has been in mobile engineering, I've been intentionally broadening my experience across full-lifecycle technologies so I can contribute from frontend user experiences to backend architecture, infrastructure, integrations, and product decisions. Throughout my career, I've contributed to enterprise-scale applications, improved developer workflows and build systems, and embraced AI-assisted engineering practices to accelerate development and problem-solving. Beyond technology, I'm driven by curiosity, craftsmanship, and intentional growth, which shape both the way I approach software engineering and the way I collaborate with teams.

Core Skills

Backend: .NET, Node.js, Express, Vapor, REST, gRPC, Python

Frontend: iOS, SwiftUI, UIKit, Android, React Native, TypeScript

Infra: CI/CD, GitLab, Azure, Fastlane, Docker, Vault, Observability, k6

Data: MongoDB, PostgreSQL, Firebase, Firestore, SwiftData, CoreData

Professional Experience

Senior Software Engineer — Sweetwater

Jul 2025 – Present

At Sweetwater, I work on both the customer-facing Sweetwater app and internal applications that support catalog, pricing, photo, and product-information workflows for hundreds of daily internal users. I contributed to Gear Exchange, Sweetwater's customer resale marketplace, and improved listing, observability, release, and performance workflows in the customer-facing app. I also deliver requested features and quality-of-life improvements for internal systems that collect Adobe InDesign catalog data, support product photo editing and image-database uploads, and automatically prepare robotic camera programs for specific product types. I helped modernize older Objective-C and Swift-backed backend systems into maintainable .NET services, partnered with another team to reduce CI build and test tasks from about 15 minutes to about 7, and integrated AI-assisted engineering practices into my day-to-day workflow to speed up investigation, implementation, and documentation.

Technologies: .NET APIs, Swift, SwiftUI, Swift Package Manager, Swift actors, URLSession, Firebase Analytics, GitLab CI/CD, Fastlane, Vault, k6, REST, Swagger/XML docs, AI-assisted engineering, macOS validation

iOS Software Engineer — Dexian (bp, earnify)

May 2023 – Nov 2024

At Dexian, I built and maintained features for bp's earnify app, a fuel-and-rewards product serving customers across 7,500+ locations with 500k+ registered users and 1M+ downloads. I was part of a team that delivered reliable app experiences at scale by connecting server-driven mobile features to backend services, improving release quality, supporting automated delivery, and keeping distributed teammates and stakeholders aligned across time zones.

Technologies: Swift, UIKit, Combine, VIPER-style architecture, Server-Driven UI, gRPC, Go-backed services, Azure CI/CD, TestFlight, unit tests, UI snapshot tests

Mobile Developer — Rural Sourcing Inc. (Sparq)

Oct 2020 – Jan 2023

At Rural Sourcing / Sparq, I worked on mobile and backend-connected products for Assurant Labs, including an insurance-policy application for smart devices such as connected washers, dryers, thermostats, and televisions. I also helped build a system-diagnostics framework that could evaluate a phone's screen, digitizer, speakers, microphone, and other sensors during insurance-claim intake, giving representatives structured test results they could pair with visual confirmation of damage such as cracked screens, missing components, or other physical defects.

Technologies: Swift, SwiftUI, React Native, TypeScript, REST APIs, JSON, Firebase Storage, Firebase Auth, Codable, Swift Package Manager, Vapor, PostgreSQL, Fastlane, unit tests

Lead iOS Engineer — Real Epic Development Studios

Oct 2019 – Jun 2020

At Real Epic Development Studios, I led development for a real-time safety communications app called Flash for TPCM USA. I helped shape a dedicated product for urgent voice, video, messaging, and notification workflows, integrating real-time backend services and working directly with stakeholders on requirements, TestFlight builds, and iterative product improvements.

Technologies: Swift, UIKit, Agora.io, VoIP, PushKit, CallKit, Firebase, Firestore, authentication, storage, notifications, snapshot listeners, TestFlight

iOS Software Developer — Self-Employed

Apr 2017 – Oct 2019

As a self-employed developer, I designed, built, and launched Achieve / Achieve Life, a habit-tracking app for people working toward daily, weekly, and monthly goals. The app is no longer maintained, but the project reflects full product ownership from concept through App Store release, user experience, persistence, notifications, progress visualization, post-launch iteration, and refactoring.

Technologies: Swift, UIKit, CoreData, local notifications, CocoaPods, third-party charting libraries, App Store release workflows

Education & Certifications

Server-Side Swift (Vapor), Python (Flask), Node.js/Express/MongoDB, TDD in iOS (Swift)
