Summary

I'm a self-taught software engineer with nearly a decade of experience specializing in iOS development, with additional expertise across backend systems, CI/CD pipelines, analytics, and cross-platform technologies. I've contributed to enterprise-scale mobile applications, improved developer workflows and build infrastructure, and worked across the full software lifecycle in collaborative engineering environments. While my background is rooted in mobile engineering, I'm actively expanding into full-stack development with growing experience in backend services, APIs, databases, and infrastructure. I'm passionate about building thoughtful, high-quality software that balances technical excellence, maintainability, and user experience.

Core Skills

iOS: Swift, SwiftUI, UIKit, Combine, CoreData, SwiftData, VisionKit, PushKit, CallKit

Architecture: MVVM, VIPER, Clean Architecture, Server-Driven UI

Other: Kotlin, React Native, TypeScript, Firebase, Node.js, Vapor, PostgreSQL, MongoDB, CI/CD (GitLab, Azure, Fastlane, TestFlight)

Professional Experience

Senior Software Engineer — Sweetwater

Jul 2025 – Present

At Sweetwater, I work on both the customer-facing Sweetwater app and internal applications used by colleagues across catalog, pricing, photo, and product-information workflows. I have improved the external app through marketplace, listing, observability, release, and performance work, while also building requested features and quality-of-life improvements for internal tools that collect product data for Adobe InDesign catalogs, support product photo editing and image-database uploads, and automatically prepare robotic camera programs for specific product types. I also helped modernize older Objective-C and Swift-backed backend systems into maintainable .NET services, partnered with another team to reduce CI build and test tasks from about 15 minutes to about 7, and integrated AI-assisted engineering practices into my day-to-day workflow to speed up investigation, implementation, and documentation.

Technologies: Swift, SwiftUI, Swift Package Manager, Swift actors, URLSession, Firebase Analytics, GitLab CI/CD, Fastlane, Vault, k6, .NET APIs, REST, AI-assisted engineering, macOS validation

iOS Software Engineer — Dexian (bp, earnify)

May 2023 – Nov 2024

At Dexian, I built and maintained features for bp's earnify iOS app, a fuel-and-rewards product serving customers across 7,500+ locations with 500k+ registered users and 1M+ downloads. I helped the team deliver reliable app experiences at scale through modular feature development, stronger release quality, automated delivery, and clear coordination across distributed teammates and stakeholders.

Technologies: Swift, UIKit, Combine, VIPER-style architecture, Server-Driven UI, gRPC, Go-backed services, Azure CI/CD, TestFlight, unit tests, UI snapshot tests

Mobile Developer — Rural Sourcing Inc. (Sparq)

Oct 2020 – Jan 2023

At Rural Sourcing / Sparq, I delivered mobile products for Assurant Labs, civic users, and safety-focused

stakeholders. That included building cross-platform customer features, creating a Swift wrapper that made hardware-test integrations easier for other developers, and shipping SwiftUI apps that helped people explore public art and respond to real-time safety information.

Technologies: Swift, SwiftUI, React Native, TypeScript, REST APIs, JSON, Firebase Storage, Firebase Auth, Codable, Swift Package Manager, Vapor, PostgreSQL, Fastlane, unit tests

Lead iOS Engineer — Real Epic Development Studios

Oct 2019 – Jun 2020

At Real Epic Development Studios, I led iOS development for Flash, a real-time safety communication app for TPCM USA. I helped shape a dedicated product for urgent voice, video, messaging, and notification workflows while working directly with stakeholders on requirements, TestFlight builds, and iterative product improvements.

Technologies: Swift, UIKit, Agora.io, VoIP, PushKit, CallKit, Firebase, Firestore, snapshot listeners, TestFlight

iOS Software Developer — Self-Employed

Apr 2017 – Oct 2019

As a self-employed iOS developer, I designed, built, and launched Achieve / Achieve Life, a habit-tracking app for people working toward daily, weekly, and monthly goals. I took the product from concept to App Store release, then continued improving it through updates, refactoring, feature iteration, and earlier companion Apple Watch work.

Technologies: Swift, UIKit, CoreData, local notifications, CocoaPods, third-party charting libraries, App Store release workflows, Apple Watch

Education & Certifications

Server-Side Swift (Vapor), Python (Flask), Node.js/Express/MongoDB, TDD in iOS (Swift)
