Summary

Full-Stack Engineer with 9+ years of experience building production systems across mobile, backend, frontend, and infrastructure layers. Delivered applications supporting 1M+ downloads, 500k+ users, and 7,500+ locations; strong across Swift, .NET, Node.js, React Native, REST, gRPC, Firebase, PostgreSQL, MongoDB, CI/CD, observability, and production debugging.

Core Skills

Backend: .NET, Node.js, Express, Vapor, REST, gRPC, Python

Frontend: iOS, SwiftUI, UIKit, Android, React Native, TypeScript

Infra: CI/CD, GitLab, Azure, Fastlane, Docker, Vault, Observability, k6

Data: MongoDB, PostgreSQL, Firebase, Firestore, SwiftData, CoreData

Professional Experience

Senior Software Engineer — Sweetwater

Jul 2025 – Present

- Built a modern .NET version of BlueprintService for internal BluePrint and PipeLine users, correcting FaaS/API contract, model, date-format, and deployment gaps; added XML/Swagger docs, k6 smoke tests, GitLab/Vault rollout support, and dev/prod parity validation.
 - Built a Swift package integration layer for internal desktop clients, replacing legacy Objective-C and MSAL auth flows with BlueprintServiceApiClient, a Swift actor, and URLSession; fixed decoding, auth, environment, and future-pricing issues during live parity testing.
 - Improved CI/CD and build-server reliability by extending GitLab runners and Fastlane lanes, configuring signing assets and Vault secrets, automating cleanup workflows, and recovering roughly 30 GB on a build server.
 - Added Firebase observability to customer-facing listing flows across iOS and Android, improving visibility into user behavior, production failures, and CAL funnel coverage for product and engineering teams.
 - Led performance and compatibility investigations across iOS and macOS apps, profiling navigation inefficiencies, creating 10+ follow-up stories, documenting OS-upgrade defects, and driving remediation work.
-

iOS Software Engineer — Dexian (bp, earnify)

May 2023 – Nov 2024

- Built features for earnify, a server-driven mobile application supporting 7,500+ locations, 500k+ registered users, and 1M+ downloads.
 - Integrated gRPC services with a Go backend and implemented modular VIPER-like architecture with UIKit and Combine, improving distributed communication, feature isolation, and testability.
 - Strengthened release quality through unit tests, UI snapshot coverage, peer reviews, Azure CI/CD delivery to TestFlight, and release notes generated from git history.
 - Improved distributed team execution by facilitating scrum ceremonies, demoing features, and coordinating delivery across stakeholders and time zones.
-

Mobile Developer — Rural Sourcing Inc. (Sparq)

Oct 2020 – Jan 2023

- Built cross-platform features for Pocket Geek Home+Smart at Assurant Labs using React Native, TypeScript, and REST JSON APIs, supporting connected-device workflows with dynamic mobile UI.
 - Designed and developed a Swift wrapper SDK for Pocket Geek Hardware Tests, improving private SDK integration through reusable abstractions, unit tests, documentation, and Fastlane-based CI/CD workflows.
 - Built full-stack features for Roll Call using SwiftUI, Vapor, and PostgreSQL, and built Fort Wayne Street Art with SwiftUI, Codable models, Firebase Storage/Auth, and Swift Package Manager.
 - Implemented REST API integrations, backend-driven features, Firebase services, peer reviews, and iterative delivery practices across mobile and full-stack project work.
-

Lead iOS Engineer — Real Epic Development Studios

Oct 2019 – Jun 2020

- Led development of Flash for TPCM USA, a real-time communication platform supporting voice, video, messaging, notifications, and safety workflows.
 - Integrated backend services with Firebase and Firestore for authentication, storage, chat, notifications, and real-time data synchronization.
 - Integrated Agora.io, PushKit, and CallKit to support native-feeling VoIP and video communication flows.
 - Designed scalable UIKit interfaces with live snapshot listener updates and collaborated with stakeholders through TestFlight-based feedback cycles.
-

iOS Software Developer — Self-Employed

Apr 2017 – Oct 2019

- Built and launched Achieve / Achieve Life, a habit-tracking mobile application from concept to App Store release.
 - Designed data models and persistence using CoreData, implemented local notifications, and built progress visualization with third-party graphing libraries.
 - Published updates, refactored the codebase, and continued feature iteration after the initial App Store release.
-

Education & Certifications

Server-Side Swift (Vapor), Python (Flask), Node.js/Express/MongoDB, TDD in iOS (Swift)
