Summary

Senior iOS Engineer with 9+ years of experience building scalable production applications using Swift, SwiftUI, UIKit, Combine, and modern Apple platform APIs. Delivered mobile products supporting 1M+ downloads, 500k+ users, and 7,500+ locations, with strong ownership across architecture, observability, performance, release validation, and backend-integrated mobile systems.

Core Skills

iOS: Swift, SwiftUI, UIKit, Combine, CoreData, SwiftData, VisionKit, PushKit, CallKit

Architecture: MVVM, VIPER, Clean Architecture, Server-Driven UI

Other: Kotlin, React Native, TypeScript, Firebase, Node.js, Vapor, PostgreSQL, MongoDB, CI/CD (Git-Lab, Azure, Fastlane, TestFlight)

Professional Experience

Senior Software Engineer — Sweetwater

Jul 2025 – Present

- Built Firebase observability into customer-facing listing flows, validating iOS and Android CAL logging coverage and improving visibility into funnel behavior, production issues, and revenue-adjacent marketplace workflows.
 - Shipped fixes across listing, review, and Photo Studio workflows, resolving preview sizing, focus-state, validation, workflow-state, logging, and hotfix release issues while coordinating QA and tagging.
 - Led an iOS performance and navigation investigation, profiling runtime behavior, tracing architectural inefficiencies, and creating 10+ follow-up stories for the broader mobile team.
 - Validated macOS compatibility across Water Calls, PhoneBook, and Insignia, documenting OS-upgrade defects and creating remediation work for internal desktop users.
 - Built API-backed Blueprint integrations for internal desktop clients, creating a Swift package client, replacing legacy auth with a Swift actor and URLSession, and fixing decoding, auth, environment, and future-pricing parity issues.
-

iOS Software Engineer — Dexian (bp, earnify)

May 2023 – Nov 2024

- Built features for earnify, a server-driven iOS app for bp customers supporting 7,500+ locations, 500k+ registered users, and 1M+ downloads.
 - Implemented VIPER-like architecture with UIKit and Combine and integrated gRPC services with a Go backend, improving modularity, maintainability, and scalable backend communication.
 - Strengthened release quality with unit tests, UI snapshot coverage, peer reviews, Azure CI/CD delivery to TestFlight, and release notes generated from git history.
 - Improved distributed team execution by facilitating scrum ceremonies, demoing features, and coordinating across stakeholders and time zones.
-

Mobile Developer — Rural Sourcing Inc. (Sparq)

Oct 2020 – Jan 2023

- Built cross-platform features for Pocket Geek Home+Smart at Assurant Labs, ramping quickly into React Native and TypeScript to deliver dynamic mobile UI backed by REST JSON APIs.

- Designed a Swift wrapper SDK for Pocket Geek Hardware Tests, improving developer experience over a private SDK; created reusable abstractions, added unit tests, improved documentation, and supported Fastlane-based CI/CD delivery.
 - Built Fort Wayne Street Art with SwiftUI, Codable, Firebase Storage/Auth, and Swift Package Manager, and built Roll Call with SwiftUI, Vapor, and PostgreSQL for real-time safety workflows.
 - Integrated Firebase services, REST APIs, and backend-driven features across mobile products while contributing through peer reviews, retrospectives, stakeholder demos, and iterative delivery.
-

Lead iOS Engineer — Real Epic Development Studios

Oct 2019 – Jun 2020

- Led development of Flash for TPCM USA, a real-time safety communication app supporting urgent voice, video, messaging, and notification workflows.
 - Integrated Agora.io for VoIP and video, Firebase and Firestore for authentication, storage, notifications, and chat, and custom UIKit interfaces with live snapshot listener updates.
 - Implemented PushKit and CallKit for native VoIP call experiences, improving reliability and reducing friction in the product's core communication flow.
 - Collaborated with stakeholders to refine requirements, distribute TestFlight builds, collect feedback, and deliver iterative production improvements.
-

iOS Software Developer — Self-Employed

Apr 2017 – Oct 2019

- Designed and launched Achieve / Achieve Life, a habit-tracking application from concept to App Store release.
 - Built habit creation, daily, weekly, and monthly goal tracking, CoreData persistence, local notifications, and progress visualization using third-party graphing libraries delivered through CocoaPods.
 - Expanded the product after launch with updates, refactoring, and continued feature iteration, including earlier companion Apple Watch work.
-

Education & Certifications

Server-Side Swift (Vapor), Python (Flask), Node.js/Express/MongoDB, TDD in iOS (Swift)
